

Introducing **A new, easier way** to cut corrugated sheet metal . . .

Model 1529 Nibbler from Bosch

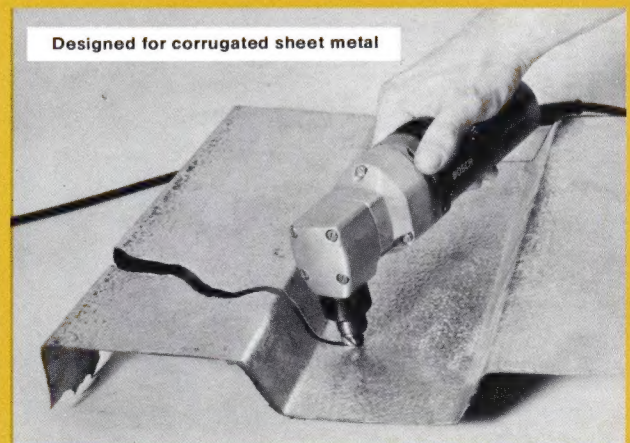

... a small, compact and lightweight unit designed with the metal building and sheet metal installation industries in mind. This unit, with its rugged 18-gauge capacity and exclusive 360° rotating head, combines all of the features that sheet metal men have asked for for years. It further incorporates the long-standing standard of quality in electric motors—the Bosch Heavy-Duty Double Insulated Minimotor. Now, for the first time, corrugated sheet cutting is done with ease and speed. Total flexibility is afforded the operator, because with the Bosch Model 1529, the operator can do free-hand cutting, or straight line cutting. Either method is easy and fast with the Bosch 1529.

Complete ball- and needle-bearing construction throughout the unit, coupled with double insulation, makes this the fastest, longest-living, and most economical unit available in the world.

Model 1529, 18 Gauge Nibbler for Corrugated Materials

- 18 gauge (.048") capacity in mild steel
20 gauge (.030") capacity in hard steel
14 gauge (.075") capacity in soft nonferrous materials
- Specifically designed for cutting corrugated materials
- New planetary gearing system provides compact cutting head to maneuver into deep corrugated configurations
- "Swivel" cutting head rotates 360°, responds to directional pressure
- Cutting radius (.118")
- Double insulated
- Supplied with special corrugated punch and die configuration:
die—2 608 639 022, punch—2 608 639 021
- **Specifications:**
2750 strokes per/min.—no load, 115V-AC, 10" length, 3½ lbs
- Optional accessories (extra cost)
Punch and die for straight nibbling:
punch—2 608 639 013, die—2 608 639 900
